Defend Your Home From Threat of “Lock Bumping” Break-Ins With Affordable Master Lock Solution

Problem: News reports indicate that 95% of locks are vulnerable to a new lock-picking technique called “bumping,” which is quickly gaining popularity in the United States through simple tools and resources available on the Internet.

Solution: Master Lock’s “NightWatch Deadbolt” is an innovative solution that prevents against lock bumping and is even capable of blocking out intruders that have access to valid house keys. It’s an affordable solution – less than 1/3 the price of competing products – to protect the most important locks in your life, your home entryway deadbolts.

- ✓ The Master Lock NightWatch Deadbolt is the only deadbolt designed to prevent an intruder from entering your home... even if they have your key.
- ✓ It looks and works just like a standard deadbolt lock, but features a patented blocking function that locks out all keys.
- ✓ To activate, owners simply lock the deadbolt as they would a standard deadbolt and then pull the lever towards them, allowing it to block all keys and making it impossible to pick when engaged.
